

You balance wheels. You match rotors.

NEWS

FOR IMMEDIATE RELEASE: November 2, 2010

Warthog. Pro-Cut's latest rotor matching system merges platform, design, and technology to create a machine of unprecedented ruggedness and versatility. The Warthog can service virtually *any rotor on any lift.*

PRO-CUT UNVEILS THE WARTHOG ROTOR MATCHING SYSTEM

West Lebanon, NH

Utilizing the patented Digital Run-Out (DRO) computer technology and an all-new heavy duty Quad-Lift trolley, the Warthog Rotor Matching System has a proven control system and latest platform technology to take on any brake job. Pro-Cut's newest lathe received high praise at SEMA in November, 2010 for its rugged construction and superior rotor surface finishes.

The Warthog features a massive cast aluminum body, providing more dampening than any previous Pro-Cut model. The new external gear box and direct-drive system allow for an increase start up torque of almost double the strongest of Pro-Cut's previous models. These features improve cut quality and allow the Warthog to turn axles on medium duty trucks with ease.

Intense prototype field testing have proven the Warthog's capabilities, giving Pro-Cut the confidence to double the standard warranty coverage to two years parts and labor.

"The Warthog is incredibly versatile — it can be used on almost any vehicle from four-lug cars up to medium duty trucks. It really shines in shops that have high-volume, or work on trucks up to medium-duty consistently. The speed and efficiency of the Warthog are especially helpful in providing commercial customers with reduced down time and the highest quality brake service," says Geoff Womer, Product Manager.

Pro-Cut International is the world leader in on-car brake lathes. The company is located in West Lebanon, NH.
