PORSCHE OF FRANCE APPROVES PRO-CUT LATHE FOR ALL DEALERS

West Lebanon, NH

Porsche in Germany has recommended the use of the Pro-Cut brake lathe since 2004 in order to allow dealers to provide perfect discs with zero lateral runout. In 2010, Porsche of France did their own evaluation of the Pro-Cut lathe and have now approved its use for all their dealers. No other method of disc brake repair is approved by Porsche.

"Around the world, Porsche is famous for legendary performance and quality. We're pleased that they have come to the conclusion that the Pro-Cut lathe is the best way to ensure smooth brake performance for their premium vehicles. Service providers who fix performance vehicles of all makes and models should take a cue from Porsche and minimize lateral runout using the Pro-Cut," says Dwight O'Hara, International Sales Manager.

Pro-Cut International is the world leader in on-car brake lathes. The company is located in West Lebanon, NH.
