GM RECOMMENDS PRO-CUT GYR OR GYR-COMPATIBLE TO USA DEALERS

West Lebanon, NH

Building on General Motor's 2004 mandate that all US and Canadian Chevrolet and GMC dealers purchase a Pro-Cut PFM 9.2 on-car lathe, the company now recommends only GYR or GYR-Compatible versions of Pro-Cut's on-car brake lathes be used, effective August, 2011.

The GYR electronics package is an upgrade that allows a Pro-Cut lathe to scan the VIN number and direct the technician to make an in-spec repair. In addition, results of each repair and the geometry of every rotor serviced may be printed for the customer and are automatically saved to the on-board tablet and the Cloud. GM, the dealer, and the customer can be assured of the quality of every brake job.

Pro-Cut now makes GYR-compatible lathes that easily accept the electronics package in both the PFM9.2 and A10 Warthog models.

"GM understands the value of a quality repair and ability of Pro-Cut GYR systems to insure quality. They're raising the bar to make sure new lathes flowing into their dealer network are GYR or GYR-compatible speaks to the direction in which the auto industry, and the whole world, is headed: using technology to improve efficiency, quality, customer satisfaction and, ultimately, profits," says Jeff Hastings, President.

Pro-Cut International is the world leader in on-car brake lathes. The company is located in West Lebanon, NH.

For more information visit www.procutusa.com or contact Jeff Hastings @ 800-543-6618, Ext. 103.

GYR. Pro-Cut's complete brake repair system directs techs through the rotor matching process and captures the finished condition of each serviced rotor. GM has recommended the GYR for all US and Canadian Chevrolet and GMC dealers.
