FOR IMMEDIATE RELEASE: 11/15/09

PRO-CUT's LATEST:

**GYR vbs** *validated brake service*

Pro-Cut GYR vbs is a complete brake repair system that directs a technician to make in-spec brake repairs and then captures the finished condition of each serviced rotor.

For the first time, customers, national service chains, and OEMs have a way of directing and confirming the quality of every brake repair job.

## PRO-CUT WINS 2nd CONSECUTIVE PTEN TOP 20 TOOL AWARD

West Lebanon, NH

Pro-Cut's latest complete brake repair system, **GYR**, has been awarded PTEN's prestigious innovation award, the 2009 **Top 20 Tool Award**. Pro-Cut was also awarded a Top 20 in 2008.

Winners were chosen by a panel of independent techs, shop owners, mechanics, and tool distributors who assessed products in a tight race for stand-out innovations that increase productivity and simplify tasks in the repair bay.

The Pro-Cut GYR directs a technician to make in-spec brake repairs and then captures the finished condition of each serviced rotor. The system includes a bar code scanner, laptop computer (with GYR application) and on-car brake lathe. A tamper-proof data system captures and records critical brake geometry upon completion of the brake rotor resurfacing. Reports on every repair can be printed, transmitted via email or even harvested from off-site.

"We're of course very pleased with the award," says CTO and GYR project leader Chris Greenwald. "It validates that the market sees the same value to our innovation as we do. We believe we're changing the future of brake service in both the front office and the shop. It's nice to know the judges at PTEN feel the same."

**Pro-Cut International** is the world leader in on-car brake lathes. The company is located in West Lebanon, NH.
