Pro-Cut's new Disc-Lock Trolley features a number of enhancements to their previous model that improve operator confidence and usability.

PRO-CUT LAUNCHES NEW DISC-LOCK TROLLEY

Pro-Cut's new Disc-Lock Trolley adds a number of features to their previous model, offering improved anti-rotation characteristics, usability, and enhancing operator confidence. Upgrades include an L arm and upper trolley arm with drilled disc, caliper, and pads actuated by a lever. Improvements have been made in the vertical height adjustment "power screw" design. A steel roller in the forward section of the vertical outer tube helps smoothly bear the increased weight of Pro-Cut's latest brake lathe model.

Pro-Cut International markets the Pro-Cut series of on-car brake lathes including the PFM 9.0 and PFM 9.2.
