Tip Screws & Torx Wrench

50-739, 50-776 & 37-740

There are two new variations of tip screws available, one that requires a T-8 Torx wrench and one that requires a 2mm Allen wrench. Both of these types of screws have an extended head which allows the chip deflector to stay in place as well as to remove them with vise grip pliers if they should strip out. (image 1 & 2) The tip screws also are contoured to better hold the tips in place. Both of these tip screws can be used on any of the Pro-Cut cutting heads. In addition, these screws are more durable and last longer. Remind your customers that the tip screws don't need to be discarded with each cutting tip change but can be used repeatedly.

Important: Part Number Change

The T-8 Torx tip screw part# has been changed from 50-740 to **50-776**. 50-776 T-8 screws are packaged 10 to a box.

The 2MM Allen tip screw is part# 50-739 and is packaged 4 to a bag.

Pro-Cut also offers a T-8 Torx Wrench, 37-740 which works in conjunction with the Torx tip screw 50- 740. The T-8 Torx wrench is available separately from Pro-Cut.
