## ● **50-497 REACH EXTENSION PLATE**

50-497 reach extension plate

**See 50-495  
& 50-492**

**SAMPLE APPLICATIONS:** 99-Newer Ford F-250  
2001 Dodge Ram 2500  
Ford F-350  
Chevrolet 3500  
Dodge 3500

### **USAGE:**

This plate is used to increase the reach of the 50-499/50-498 Slide Plate.

With the 50-497 installed on the Slide Plate the reach of the lathe is increased 63mm or 2.5". This allows the lathe to cut vehicles with rotors that are a large distance from the hub. Another reason to use the 50-497 Reach Extension Plate is to gain reach when the adapter has a long hat that moves the lathe body further away from the rotor and can no longer be reached.

The 50-497 Reach Extension Plate is installed on the Slide Plate by placing plate on into the dovetail and then secured using the 35-238 M8 socket headed cap screws included with the plate.
